Target platform

Percentages are calculated only from the 93 complete scans, excluding 4 partial scans, 0 failed scans, and 3 repositories with no eligible source. Each repository is counted in exactly one category, so shares add up to 100%.

One primary platform per repository: an explicit OS target wins, several OS targets = Multiple OS, otherwise the most specific environment; generic runtimes/scripts come last.

Project application and automation types

Share of complete repository scans with collected project findings, including libraries/tools and non-Windows PowerShell. Each repository counts once per category across its projects. Categories overlap: Windows desktop app includes Windows Forms, WPF, WinUI, and UWP; shares need not sum to 100%. Older inventories without project findings are excluded. Static indicators do not prove executable or runtime behavior.

Static, source-level evidence only; detection of a pattern is not proof of runtime use, and absence of a match is not proof of non-use. Partial and failed scans are nonresponse and are excluded from distributions, which can bias estimates if they differ systematically.
