Public App Development Observatory

Window 2026-09-26T17:00:00Z → 2026-10-26T17:00:00Z (UTC) · generated 2026-10-26T21:11:02Z · ruleset pilot-5 · Microsoft Application Inspector 1.10.2

Uniform random sample of 100 repositories drawn from 369,057 public repositories with qualifying human activity in GH Archive. Source-scan shares carry 95% Wilson confidence intervals; worst-case margin for complete scans is ±9.95 percentage points.

369,057	100	97	1	0	2
Population (30 days)	Sampled repositories	Complete scans	Partial	Failed	No eligible source

Subset of the 97 complete scans

16	13
Windows candidates of 97 complete scans	Windows applications of 97 complete scans

20	80
Cross-OS applications of 100 sampled repositories	Non-cross-OS applications of 100 sampled repositories

Cross-OS application support and primary languages

Category	Repositories	Most used language	Second most used
Cross-OS	20 (20.0%)	TypeScript: 6 (30.0%)	Go: 3 (15.0%); Python: 3 (15.0%) (tied)
Non-cross-OS	80 (80.0%)	TypeScript: 24 (30.0%)	Python: 16 (20.0%)

All 100 sampled repositories are retained, including incomplete source scans and non-application repositories. Languages use GitHub's primary language per repository; percentages are within each category. Ties are retained. The second column of languages shows the next distinct frequency rank.

Evidence review of pinned public documentation and application build/test targets. Cross-OS requires an actual application with explicit support for at least two operating systems. Browser access, portable runtimes, library/SDK support, development-only setup, container hosts, architectures and inactive upstream targets do not qualify. Non-cross-OS means support not demonstrated, not proven incompatibility. Static review, not cross-OS runtime testing.

Seed 2026-10-26T17:00:00Z · 720/720 archive hours · 1,183,714 qualifying events · 4 sampled repositories replaced because they were deleted/private.

Primary programming languages and their target platforms

Percentages are calculated only from the 97 complete scans, excluding 1 partial scans, 0 failed scans, and 2 repositories with no eligible source. Each repository is counted in exactly one category, so shares add up to 100%.

GitHub's primary language per repository. The last column splits each language's repositories by primary target platform (an explicit OS target wins, several OS targets = Multiple OS, otherwise the most specific environment; generic runtimes/scripts come last), so each language's platform shares add up to 100%.

Category	Count / n	Share	95% CI	Target platform distribution
TypeScript	30/97	30.93%	22.6–40.7%	Web: 73.33%, Multiple OS (incl. Windows): 10.0%, Node.js tooling/runtime (OS unspecified): 6.67%, Server / backend: 3.34%, Smart contracts: 3.33%, Windows: 3.33%

Angular	1/97	1.03%	0.18–5.61%
Django	1/97	1.03%	0.18–5.61%
Flutter	1/97	1.03%	0.18–5.61%
Spring Boot	1/97	1.03%	0.18–5.61%

Project application and automation types

Share of complete repository scans with collected project findings, including libraries/tools and non-Windows PowerShell. Each repository counts once per category across its projects. Categories overlap: Windows desktop app includes Windows Forms, WPF, WinUI, and UWP; shares need not sum to 100%. Older inventories without project findings are excluded. Types are identified from source patterns and project metadata, not inferred from OS or language. Repositories without sufficient type evidence remain in the denominator and are reported in the classification coverage note, not as application types. Static indicators do not prove executable or runtime behavior.

Category	Count / n	Share	95% CI
Web frontend	54/97	55.67%	45.76–65.15%
Shell / batch automation	51/97	52.58%	42.73–62.23%
Python application / script	44/97	45.36%	35.82–55.26%

Windows services	0/16	0.0%	0.0–19.36%

Windows-container compatibility and containerization potential

Static base-image indicators from scanned Dockerfiles and Containerfiles; no build or runtime test. Source indicators do not prove build or runtime compatibility; absence of a Dockerfile is not proof of incompatibility.

Among complete Windows-targeted scans, repositories with container/orchestration configuration or Dockerfile/Containerfile base images are excluded. Remaining project-type and Windows-component indicators are heuristic screening evidence, not a test of Windows-container support.

The two assessment scopes overlap; their counts must not be added together.

Scope	Assessment	Repositories
Base-image evidence	Windows base image configured	0
Base-image evidence	Linux base image configured	7
Base-image evidence	Mixed or ambiguous base images	16
Base-image evidence	No container base-image evidence	74
Base-image evidence	Incomplete source scan	3
Containerization potential	Potentially suitable; validate with a build/run	4
Containerization potential	Conditional; dependencies or project type need review	1
Containerization potential	Poor fit for standard Windows Server containers	2
Containerization potential	Insufficient project evidence	3
Containerization potential	Excluded: container/orchestration evidence detected	6
Containerization potential	Excluded: no Windows target detected	81
Containerization potential	Not assessed: incomplete scan	3

Repository	Existing container evidence	Containerization potential	Source evidence
PavelZinchenko/event-horizon-main	No Dockerfile or Containerfile base image was found in the scanned source; this does not establish incompatibility.	Containerization may be possible, but detected Windows/cross-platform dependencies or application type need validation: .NET native interop, Command-line tool.	.NET native interop (Assets/Plugins/NativeFilePicker/NativeFilePicker.cs:51), .NET native interop (Assets/Plugins/NativeFilePicker/NativeFilePicker.cs:54), .NET native interop (Assets/Plugins/NativeFilePicker/Nati .NET native interop (Assets/Plugins/NativeFilePicker/NativeFilePicker.cs:60), .NET native interop (Assets/Plugins/NativeFilePicker/NativeFilePicker.cs:63), .NET native interop (Assets/Plugins/NativeFilePicker/iOS/FPResultCallbackiOS.cs:18), Command-line tool (Assets/Editor/mod_pbxproj application / script (Assets/Editor/mod_pbxproj.py:1518), Shell / batch automation (Assets/Modules/Database/analy batch automation (Assets/Modules/Database/editor.cmd:1), Shell / batch automation (Assets/Modules/Database/ge Shell / batch automation (Assets/Modules/Database/generate_migration_code.cmd:1), Shell / batch automation (Assets/Modules/Database/rebuild_editor.cmd:1), Shell / batch automation (Assets/Modules/GameSession/generat frontend (Assets/WebGLTemplates/FullscreenWindow/index.html:2)

Identified Windows repositories

Windows candidates: complete scans with a Windows platform signal, including libraries/tools and multi-OS repositories. Community feedback is limited to the report window and the collected sample, not a live or community-wide assessment.

Repository	Scan	Language	Platform	Framework	Windows app type	Windows components	Repository analysis
PavelZinchenko/event-horizon-main	success	C#	Windows	No framework detected	Console / other / unknown	.NET native interop	**Problems solved** The repository provides a central hub for the game "Event Horizon," offering the latest releases, source code, and a platform for reporting bugs and requesting features, primarily for players and developers interested in contributing to or improving the game. S1: readme **Development status** The repository is actively maintained, with the last push occurring on October 21, 2026, and the latest release, version 1.13.2, published on October 14, 2026. The repository is not archived, indicating ongoing development and updates. S1: readme; S2: repository_status **Why open source** The motivation for publishing this application as open source is not documented in the provided sources. S1: readme **Latest community feedback** Community feedback includes bug reports such as issues with ship presets and color modification errors, as well as enhancement requests like improvements to stealth devices and faction filters. There are also suggestions for fixing validation and factory logic in the game. S3: issue; S4: issue; S5: issue; S6: issue; S7: issue; S8: issue; S9: issue; S10: issue Feedback window (UTC): 2026-09-26T17:00:00Z → 2026-10-26T17:00:00Z. AI-generated at 2026-10-26T21:11:03Z with gpt-4o; verify against sources. Bounded sample: up to 10 most recently updated issues and the last 10 comments per issue, collected at analysis time. Only human openings/comments within the report window inform community response; PRs are excluded. Issue count includes bot-created issues. README/description and issue bodies reflect their retrieved versions, not a historical snapshot of the window. Archive status, last push and latest release reflect collection time; push/issue activity alone does not establish active maintenance or development maturity. README capped at 8000 characters, issue excerpts at 800, comments at 400. Additional updated issues: yes; older comments omitted: no. This is not a community-wide sentiment measure.
marcusk639/recovery-platform	success	TypeScript	Multiple OS (incl. Windows)	React Native	Cross-platform: React Native	Win32	**Problems solved** The repository provides a platform for managing various aspects of recovery programs, including 12-step group management, sober-living house operations, and detox and treatment site management, primarily for organizations involved in recovery services. S1: description; S2: readme **Development status** The repository is actively maintained, with the last push occurring on October 26, 2026. It is not archived, indicating ongoing development, although there is no documented release information. S1: description; S2: readme; S3: repository_status **Why open source** The motivation for publishing this application as open source is not documented in the available sources. S1: description; S2: readme **Latest community feedback** Recent issues highlight technical problems such as compatibility issues with TypeScript and Java versions, configuration errors in production environments, and logic errors in scheduled functions. These issues suggest active user engagement in identifying and reporting bugs, but there is no evidence of maintainer responses within the sampled issues. S4: issue; S5: issue; S6: issue; S7: issue; S8: issue; S9: issue; S10: issue Feedback window (UTC): 2026-09-26T17:00:00Z → 2026-10-26T17:00:00Z. AI-generated at 2026-10-26T21:11:09Z with gpt-4o; verify against sources. Bounded sample: up to 10 most recently updated issues and the last 10 comments per issue, collected at analysis time. Only human openings/comments within the report window inform community response; PRs are excluded. Issue count includes bot-created issues. README/description and issue bodies reflect their retrieved versions, not a historical snapshot of the window. Archive status, last push and latest release reflect collection time; push/issue activity alone does not establish active maintenance or development maturity. README capped at 8000 characters, issue excerpts at 800, comments at 400. Additional updated issues: no; older comments omitted: no. This is not a community-wide sentiment measure.

Repository	Scan	Language	Platform	Framework	Windows app type	Windows components	Repository analysis
google/agentmesh	success	Go	Multiple OS (incl. Windows)	Flutter	Cross-platform: Flutter	Win32	**Problems solved** The repository provides a private network for AI agents, allowing them to publish tools and models, discover and call services, and verify identities across various environments like laptops, containers, and clusters. It is designed for developers and organizations needing secure, cross-environment communication for AI agents. S2: readme **Development status** The repository is in a pre-1.0 stage, with stable core components like nodes, routers, and control planes, as indicated by the README. The last push was on October 25, 2026, and the latest release was on October 18, 2026, suggesting ongoing development. However, the project is not officially supported by Google. S2: readme; S3: repository_status **Why open source** The motivation for publishing this application as open source is not explicitly documented in the provided sources. S1: description; S2: readme **Latest community feedback** Community feedback includes discussions on technical issues like integration with Docker Sandboxes and Keycloak, and the need for real-world integrations and examples. Participants are actively engaging in resolving issues and contributing to the development, as seen in the collaborative efforts to address specific technical challenges. Repository	Scan	Language	Platform	Framework	Windows app type	Windows components	Repository analysis
hezev/ams-skunk-telemetry	success	JavaScript	Windows	No framework detected	Console / other / unknown		**Problems solved** The repository provides a telemetry web portal for the AMS ecosystem, designed to handle both historical data and live data from a Pitwall, which is useful for users needing to monitor and analyze telemetry data in real-time or from past records. S1: readme **Development status** The repository is in an early development stage, specifically Phase 1, where it offers a functional interface with simulated data. The next planned phase involves integrating with Supabase for real telemetry data. The repository is not archived, and the last push was recent, on October 21, 2026, indicating some ongoing development activity. S1: readme; S2: repository_status **Why open source** The motivation for publishing this application as open source is not documented in the available sources. S1: readme **Latest community feedback** There is no community feedback available within the specified window, as no issues or comments were opened or sampled during this period. Feedback window (UTC): 2026-09-26T17:00:00Z → 2026-10-26T17:00:00Z. AI-generated at 2026-10-26T21:11:43Z with gpt-4o; verify against sources. Bounded sample: up to 10 most recently updated issues and the last 10 comments per issue, collected at analysis time. Only human openings/comments within the report window inform community response; PRs are excluded. Issue count includes bot-created issues. README/description and issue bodies reflect their retrieved versions, not a historical snapshot of the window. Archive status, last push and latest release reflect collection time; push/issue activity alone does not establish active maintenance or development maturity. README capped at 8000 characters, issue excerpts at 800, comments at 400. Additional updated issues: no; older comments omitted: no. This is not a community-wide sentiment measure.
WindowHyun/ISTQB	success	TypeScript	Multiple OS (incl. Windows)	React	Native / Win32 (UI not proven)	Win32	**Problems solved** The repository provides an online CBT (Computer-Based Testing) application for solving ISTQB Foundation Level v4.0 and CSTS (SW Test Specialist) exam questions in Korean, aimed at individuals preparing for these certifications. S1: readme **Development status** The repository is not archived and had its last push on October 19, 2026, indicating recent activity. However, the latest release was on June 1, 2026, suggesting that while there is some ongoing development, the release cycle may not be frequent. The development stage is not explicitly documented. S1: readme; S2: repository_status **Why open source** The motivation for publishing this application as open source is not documented in the available sources. S1: readme **Latest community feedback** There is no community feedback available within the provided window, as no issues or comments were opened or sampled. Feedback window (UTC): 2026-09-26T17:00:00Z → 2026-10-26T17:00:00Z. AI-generated at 2026-10-26T21:11:47Z with gpt-4o; verify against sources. Bounded sample: up to 10 most recently updated issues and the last 10 comments per issue, collected at analysis time. Only human openings/comments within the report window inform community response; PRs are excluded. Issue count includes bot-created issues. README/description and issue bodies reflect their retrieved versions, not a historical snapshot of the window. Archive status, last push and latest release reflect collection time; push/issue activity alone does not establish active maintenance or development maturity. README capped at 8000 characters, issue excerpts at 800, comments at 400. Additional updated issues: no; older comments omitted: no. This is not a community-wide sentiment measure.

Repository	Scan	Language	Platform	Framework	Windows app type	Windows components	Repository analysis
liverty-music/backend	success	Go	Windows	No framework detected	Native / Win32 (UI not proven)	Win32	**Problems solved** The repository provides a backend service for Liverty Music, a platform that offers personalized concert notifications to music fans, transforming concert discovery from active searching to automated alerts. It is designed for passionate music fans who attend numerous concerts annually, offering features like artist subscriptions, concert data management, and smart notifications. S2: readme **Development status** The repository is actively maintained, with the last push and latest release occurring on October 25, 2026. The project is not archived, indicating ongoing development and updates. S1: description; S2: readme; S3: repository_status **Why open source** The motivation for publishing this application as open source is not documented in the provided sources. S1: description; S2: readme **Latest community feedback** Community feedback includes issues related to technical improvements and bug fixes, such as adding error codes to failed events, indexing database columns, and handling empty strings in certain functions. There are also suggestions for improving error handling and consistency in code practices. These issues indicate active engagement with the technical aspects of the project. Static, source-level evidence only; detection of a pattern is not proof of runtime use, and absence of a match is not proof of non-use. Partial and failed scans are nonresponse and are excluded from source-scan distributions, which can bias estimates if they differ systematically. The separate cross-OS review retains all sampled repositories.
